(54) Title: DRUG ADMINISTRATION SUPPORT SYSTEM

(57) Abstract: The total clearance of a drug is calculated based on the blood filtering information, biological information and drug information. The total clearance is displayed on a drug administration support screen (24). The drug administration support screen (24) provides a guideline of the dose of a drug which varies dependent on the level of the renal creatinine clearance. Specifically, the renal clearance of the drug and the clearance of the drug due to continual hemofiltration (CHF) are shown in a graphical form, and a guideline of the dose of the drug is provided which varies dependent on the level of the total clearance. Accordingly, the user can easily recognize the meaning of the guideline by referring to the total clearance of the drug shown in the graph. The drug administration support display screen (24) also provides additional information necessary for drug administration as appropriate.
